Bulletin MSG30-5513-M1/UK

Service/Spare Parts Series F12

Effective: March, 2023

Supersedes: October, 2021

ENGINEERING YOUR SUCCESS.

Basic formulas for hydraulic motors

Flow (q)	D – displacement [cm ³ /rev]
$q = \frac{D \times n}{1000 \times \eta_v}$ [l/min]	n – shaft speed [rpm]
	η_v – volumetric efficiency
Torque (M)	Δp – differential pressure [bar] (between inlet and outlet)
$M = \frac{D \times \Delta p \times \eta_{hm}}{63}$ [Nm]	η_{hm} – mechanical efficiency
Power (P)	η_t – overall efficiency ($\eta_t = \eta_v \times \eta_{hm}$)
$P = \frac{q \times \Delta p \times \eta_t}{600}$ [kW]	

Basic formulas for hydraulic pumps

Flow (q)	D – displacement [cm ³ /rev]
$q = \frac{D \times n \times \eta_v}{1000}$ [l/min]	n – shaft speed [rpm]
	η_v – volumetric efficiency
Torque (M)	Δp – differential pressure [bar] (between inlet and outlet)
$M = \frac{D \times \Delta p}{63 \times \eta_{hm}}$ [Nm]	η_{hm} – mechanical efficiency
Power (P)	η_t – overall efficiency ($\eta_t = \eta_v \times \eta_{hm}$)
$P = \frac{q \times \Delta p}{600 \times \eta_t}$ [kW]

Tutorial:
Assembly Guide,
Series F12

Tutorial:
Disassembly Guide,
Series F12

General information

F12 is bent axis, fixed displacement heavyduty motor/pump series. They can be used in numerous applications in both open and closed loop circuits.

Series F12 conforms to current ISO and SAE mounting flange and shaft end configurations. Series F12 are available in ISO, Cartridge, SAW and SAE versions.

The F12 series is available in sizes 30, 40, 60, 80, 90, 110, 125, 152, 162, 182 and 250 cc.

Thanks to the unique spherical piston design, F12 motors can be used at unusually high shaft speeds. Operating pressures to 500 bar provides for the high output power capability.

The 40° angle between shaft and cylinder barrel allows for a very compact, lightweight motor/pump.

The laminated piston ring offers important advantages such as low internal

leakage and thermal shock resistance.

The pump version has highly engineered valve plates for increased selfpriming speed and low noise, available with left and right hand rotation.

The F12 motors produce very high torque at start-up as well as at low speeds. Our unique timing gear design synchronizes shaft and cylinder barrel, making the F12 very tolerant to high 'G' forces and torsional vibrations.

Heavy duty roller bearings permit substantial external axial and radial shaft loads.

The F12's have a simple and straightforward design with very few moving parts, making them very reliable motors/pumps.

The unique piston locking, timing gear and bearing set-up as well as the limited number of parts add up to a very robust design with long service life and, above all, proven reliability.

F12 cross section

1. Barrel housing
2. Valve plate
3. Cylinder barrel
4. Piston with piston ring
5. Timing gear
6. Tapered roller bearing
7. Bearing housing
8. Shaft seal
9. Output/input shaft

Specifications**Series F12**

1) Intermittent: max 6 seconds in any one minute.

Preparation

Before disassembling motor:

- Always keep work space clean
- Always use correct tools
- Make documentation and take photos if required
- Only use standard spare parts from Parker

Changing shaft seal:

Follow step: 8 – 12 and 26 – 30

Changing seal kit:

Follow step: 1 – 2, 7 – 12, 26 – 37

Changing repair kit:

Follow step: 1 – 5, 32 – 37

Changing shaft and bearing kit:

Follow step: 1 – 37

Tools required

- Retaining ring tool, internal and external
- Hex key
- Plastic hammer
- Mandrel
- Hook tool
- Torque wrench
- Brush
- Hydraulic press

Disassemble F12-030 – 125

1. Fasten the unit in a vice.
Loosen the 4 bolts (item 491).

2. Disassemble the barrel housing (item 110). Make sure that the valve plate doesn't fall out when lifting the barrel housing off.

Tips! If the parts are stuck, use a plastic hammer and tap carefully underneath.

3. When disassembling valve plate (item 121), use a tool like a hook and remove as shown.

4. Remove the cylinder barrel (item 411)

Disassemble F12-030 – 125

5. Remove the pistons (item 440)

6. Remove the barrel support (item 430)

7. Remove the O-ring (item 221)
Always change seal kit when
removing seals

8. Disassemble the retaining ring
(item 237)

Disassemble F12-030 – 125

9. Remove the seal carrier (item 231)

10. Remove the O-ring (item 225)
Always change seal kit when removing seals.

11. Disassemble the retaining ring (item 238)

12. Tap the shaft seal out with hammer and mandrel.

Disassemble F12-030 – 125

13. Disassemble the retaining ring (item 478)

14. Remove the space washer (item 476)

15. Place the bearing housing (item 211) on a tube. Press out the shaft (item 311) by pressing on the shaft end.

Tips! Put some soft material (towel or rag) inside the tube to avoid marks when shaft loosen.

16. Remove the small tapered roller bearing (item 470)

Disassemble F12-030 – 125

17. Tap the small bearing ring with a mandrel and hammer

18. Tap the large bearing ring with a mandrel and hammer

19. Place the ring gear (item 453) on a tube. Press out the shaft (item 311) by pressing on the shaft end.

Tips! Put some soft material (towel or rag) inside the tube to avoid marks when shaft loosen.

Assembly F12-030 – 125

20. If bearings have been disassembled it's recommended to change both tapered bearings, see spare part list for correct bearing kit. Press down the tapered bearing (item 460) and the ring gear (item 452) on the shaft with a press. Bearings are available in bearing kit. Use a tube, see page 16.

22. Press down the bearing ring (item 470) in the bearing housing (item 211) with a press. Use a tube that match the outer diameter of the bearing ring.

21. Press down the bearing ring (item 460) in the bearing housing (item 211) with a press. Use a tube that match the outer diameter of the bearing ring.

23. Place the bearing housing (item 211) on the shaft (item 311) and place the small bearing (item 470) on the shaft. Press down the bearing at the same time rotate the bearing housing. Correct bearing preload is achieved when there are no gap or play in the bearings and a small resistance is achieved when rotating the bearing housing.

Assembly F12-030 – 125

24. Install the space washer (item 476).
Space washers are available in different thickness, these are included in bearing kit.

25. Install the retaining ring (item 478)
Included in bearing kit
Secure that the retaining ring is correct mounted in the groove and the space washer is tight mounted.
Tips! Use mandrel and hammer to tap carefully to secure that retaining ring is mounted correct.

26. Install the O-ring (item 225)
Included in seal kit
Tips! Use some oil on the O-ring

27. Tap the new shaft seal back with a tube and a hammer.

Assembly F12-030 – 125

28. Assemble the retaining ring (item 238)

29. Install the seal carrier (item 231)

Tips! Protect the shaft seal from shaft edges on shaft.

30. Install the retaining ring (item 237)

Included in seal kit

Tips! Tap with mandrel and hammer to secure retaining ring is correct assembled.

31. Install the O-ring (item 221)

Included in seal kit

Assembly F12-030 – 125

32. Lubricate the ball socket with oil. Install the pistons (item 440), included in repair kit. Make sure that the piston can rotate without any restrictions. Install the barrel support (item 430). Use grease on the support ball to secure it will stay in position.

33. When assembling valve plate (item 121), secure that the groove is correct assembled. Also secure notches as towards the cylinder barrel. Valve plate is available in repair kit.
Tips! Use the cylinder barrel to tap carefully until valve plate is assembled correct in barrel housing.

34. Install the cylinder barrel (item 411). Ensure correct timing (marking – punch mark on ring gear and cylinder barrel). Wrong assembled timing can cause damage.

35. Use oil on cylinder barrel and O-ring.

Assembly F12-030 – 125

36. Install the barrel housing (item 110) by mount the center pin of barrel housing in the cylinder barrel, move the barrel housing in correct angle.

Install the screws (item 491) and shims (item 488)

Tips! Tap carefully with plastic hammer on Barrel housing.

37. Fasten the 4 bolts (item 491) to specified torque.

F12-030 65 ± 10 Nm

F12-040 65 ± 10 Nm

F12-060 65 ± 10 Nm

F12-080 115 ± 10 Nm

F12-090 115 ± 10 Nm

F12-110 115 ± 10 Nm

F12-125 115 ± 10 Nm

F12-250 220 ± 35 Nm

Type	øA	øB	øC
F12-030	60	49	42
F12-040	65	58	52
F12-060	73	64	57
F12-080/-090	74	70	62

F12-250	97	-	82

Valve plates F12

M

A = Bi-directional, motor operation
Ex. F12-080-**MF**-IV-K-000-0000-P0

Against cylinder barrel

L

L = Left (CCW) rotation, pump operation
Ex. F12-080-LF-IV-K-000-0000-P0

R

R = Right (CW) rotation, pump operation
Ex. F12-080-RF-IV-K-000-0000-P0

Against cylinder barrel

Assembly F12-250

1. Press down the tapered roller bearing (item 460) and the ring gear (item 452) on the shaft with a press. Use a tube (see page 16).
2. Carefully press down the tapered roller bearing (item 470) until correct preload of the bearing package is achieved. Use a tube (see page 16).

3. Assemble the lock washers (item 474) and the round nut (item 475). Tap in the lock washers to lock the round nut.
4. Assemble the shaft seal (item 233) and the support ring (item 236). Locate the chamfer on the support ring downwards. Tap it down with a plastic collar. Assemble the retaining ring (item 237). Lubricate the shaft seal before assembling the housing.

Assembly F12-250

5. Tap down the bearing package into the bearing housing (item 211) by using a plastic collar and a plastic hammer.

6. Assemble the pistons (item 440). Lubricate the ball sockets before assembling.

7. Assemble the tap roller bearing (item 425), the disc spring (item 433), the spacer washer (item 426) and the retaining ring (item 427).

8. Press down the bearing ring (item 425), the spacer sleeve (item 422), the needle bearings (item 415) and the retaining ring (item 414).

Locate the needle bearings against the retaining ring. Assemble the spring pins (item 413) and the sliding plate (item 424).

Assembly F12-250

9. Assemble the cylinder barrel (item 411) on the pistons (item 440). Make sure the timing is correct.

10. Assemble the O-ring (item 222) on the barrel housing (item 481). Lubricate the O-ring.

11. Assemble the barrel housing. Make sure the cylinder barrel is in correct position by holding the barrel spindle (item 423). Tap the housing down with a plastic hammer.

12. Assemble the O-rings (item 223 and 224) on the end cap (item 111). Lubricate the O-rings.

Assembly F12-250

13. Place the end cap on to the barrel housing until the O-ring is entered.

14. Fit a long screw (M12) to the barrel spindle and pull the barrel spindle up with a universal pliers.

15. Knock down the end cap with a plastic hammer and fit shims (item 488) and hexagon screws (item 493). Torque the screws to 330 ± 10 Nm.

16. Install the cap screw (item 428) that secures the barrel spindle.

Assembly F12-250

17. Torque the cap screw to 40 – 45 Nm and back off 1/3 of a turn to obtain correct axial play.

18. Hit the cap screw one time to obtain back-lash. Make sure the back-lash is correct.

Test Procedure

The general condition of the unit can be established by checking the drain flow. Remove the drain line and keep the drain port above a suitable container. Run the unit at 500 rpm and pressurise the system to 200 bar (3000 psi)

Measure the drain flow for one minute; if it exceeds the maximum figures shown below, the unit is worn or damaged internally and should be replaced or repaired. Also, check for leakage at the shaft seal and between the bearing and barrel housings.

Series	Normal (gpm, US)	Normal (l/min)	Max (gpm, US)	Max (l/min)
F12-030	0.12	0.5	0.24	0.9
F12-040	0.16	0.6	0.32	1.2
F12-060	0.24	0.9	0.47	1.8
F12-080	0.32	1.2	0.64	2.4
F12-090	0.37	1.4	0.74	2.8
F12-110	0.44	1.7	0.87	3.3
F12-125	0.50	1.9	0.99	3.8
F12-250	0.64	2.4	1.60	6.1

Cavitation

Cavitation marks in the cylinder barrel bores, on the port side or on the valve plate depends on air in the oil.

Reasons can be when inlet pressure/flow isn't sufficient. Example when stopping a fan drive and inertia will run the motor.

Why cavitation?

- Too high speed
- Too low inlet pressure (pump mode)

What consequence?

- A metallic sound comes from the system
- Material damage as craters in the goods which contaminate the hydraulic system
- Lift off if severe cavitation
- Shaft seal leakage

Cavitation

Valve plate with scratched surface.

The damage depends on contaminated oil due to poor filtration, clogged filter, previous break down or bad handling when filling the reservoir.

Cylinder barrel with severe damaged surface at the porting. The damage depends on contaminated oil due to poor filtration, clogged filter, previous break down or bad handling when filling the reservoir.

Pistons with worn out piston rings, some of them are missing and the spher is very damaged.

This depends on contaminated oil and/or overspeed/cavitation.

Cavitation

Pistons with the grinding rings intact have been in a clean system. No over-speed and good viscosity on the oil.

Pistons with worn piston ball. The ball is polished due to contaminated oil and/or overspeed.

Note!

High temperature (low viscosity) can be a reason.

Cavitation

Severe damage in cylinder bore at the pistons turning point.

Reason is too high speed, the piston is thrown out in the periphery and breaks through the protecting oil film.

High speed wear

High speed wear at the outer periphery on the cylinder barrel. The protecting oil film can't withstand the high speed.

There are also cavitation marks on the cylinder barrel.

Cavitation

From the same cylinder barrel there are severe cavitation marks in the cylinder bores due to high speed.

Bearing spare part kit contain:

Tap Rol Bearing pos: 460, 470
 Spacer ring pos: 464
 Lock washer pos: 474
 Round nut pos: 475

Shim kit contain:

Shims pos: 488
 (1 pcs on each side)

*Kit contain 100 pcs

How to Properly Select a F11/F12 Spare Part

The first page of spare parts bulletin will display a “split view” drawing with the parts identified with numbers shown in red below.

For our example we will be using the description F12-030-MS-SV-T-000-0000-P0 which has the part number 3721581 associated with it.
The part number is the number used to order the motor and takes precedence over the description.

F12	—		—			—			—			—			
		Frame size		Function	Main ports		Mounting flange	Shaft seal		Shaft			Version number	Option page 77 – 79	Option page 7

The pages we may need to use are the “split view” and the parts list for the particular motor size. In our example **F12-030-MS-SV-T-000-0000-P0**, “**F12-030**” is the size of the motor, and we need to turn to that particular page.

Bulletin MSG30-5513-M1/UK		Service Manual/Spare Parts	
Spare Parts Series F12		F12-30	
<u>F12-030</u> all types from serial no. <u>201809300001</u> and up.			
Pos	Part No	Description	Qty Remarks

The motor must be within the serial number range (red line) Serial number is described as YYYYMMDD****. Always contact Parker Division if your unit is produced prior to serial number

The columns are defined as:

- Pos. – The number from the split view that identifies the part
- Part Number – The number needed to purchase that part
- Description – The description of the part and the matching model code character
- Quantity – The number of that particular part you need to order for one unit
- Remarks – These can give you extra information to define the part

For motor F12-030-MS-SV-T-000-0000-P0 we need the barrel housing, shaft, and shaft seal.

For the barrel housing we can find the part a couple of ways. If there is visual recognition of the part, then the item number can be found by looking at the “split view” of the motor and locating the item number. In this case it is number 110.

Pos	Part No	Description	Qty	Remarks
Housing parts				
61		Hex Socket Plug M12*1	1	VSTI12X1EDVITCF
110	3721864	Barrel Housing Assy Type F	1	
110	3721863	Barrel Housing Assy Type S	1	
130		Hex Socket Plug for S housing	1	8 HP50N-S
130		Hex Socket Plug for F housing	1	VSTI18X1,5EDVITCF

The other way is to know the name of the part, barrel housing assy (red type), and look at the parts listing for the description.
The red S in the description matches our model number F12-030-MS-SV-T-000-0000-P0 and has part number 3721863 (in green), quantity 1. Note that the Hex socket plug is not included, should be ordered from Parker Fitting division (in blue)

The shaft is the next item to be found. Looking for it visually in the “split view” we can determine that the shaft is item number 310.

We can refer to the parts list for the name of the part, shaft (red type), and look at the parts listing for the description.

Pos	Part No	Description	Qty	Remarks
310	3799644	Shaft type P	1	Require flat key
310	3799634	Shaft type S	1	
310	3799640	Shaft type T	1	Require flat key
321	3724437*	Flat Key for K and P shaft	1	

The blue T in the description matches our model number F12-030-MS-SV-T-000-0000-P0 and has part number 3799640 (in green), quantity 1.

In the remarks (orange text) we have a note that states “Require Flat Key”. We can offer that part to the customer, Flat keys must always be order with Minimum Order Quantity (MOQ)

Pos	Part No	Description	Qty	Remarks
321	3724437*	Flat Key for K and P shaft	1	
321	3724449*	Flat Key for T shaft	1	

The blue T in the description matches our model number F12-030-MS-SV-T-000-0000-P0 and has part number 3724449 (in green), quantity 1.

The shaft seal is the next item to be found. Looking for it visually in the “split view” we can determine that the shaft is item number 233.

We can refer to the parts list for the name of the part, shaft seal item 233 (red circle), and look at the parts listing for the description.

Some parts are not sold as separate items and will only be available in kits.

		Seal kit contain: O-rings pos: 221, 225, 229 Shaft seal pos: 233 Retaining rings pos: 237, 238
	Seal kits	
3793493	Sealing kit type V FPM	
3785132	Sealing kit type N NBR	
3784552	Sealing kit type S PTFE	
3720898	Sealing kit type S SuperCut 100	
	Repair Spare part Kit	Repair spare part kit contain: Valve plate pos: 121 Cylinder Barrel pos: 411 Pistons pos: 440 (7 pcs) Hex Screws pos: 491 (4 pcs)
3721446	Type M (Motor)	
3722010	Type S (High speed Motor)	
3723977	Type L (CCW pump)	
3723978	Type R (CW pump)	
	Bearing spare part kit	Bearing spare part kit contain: Tap Rol Bearing pos: 460, 470 Spacer pos: 476 Retaining rings pos: 478
3723971	Bearing kit	
	Shim kit	Shim kit contain: Shims pos: 488 (1 pcs on each side)
3721330	Shims kit	
*Kit contain 100 pcs, **Kit contain 20 pcs		

In the Kits section, we need to look at the right to determine which parts are required based on pos number. In this example we would like to get pos 233, shaft seal. Then it's only available in a seal kit and not sold as a separate item. Some kits can be sold with MOQ.

We are looking for a shaft seal item 233, and there appears to be 2 seal kits to choose between. The model code calls out a V, F12-030-MS-SV-T-000-0000-P0, and it matches the seal kit with the V so our part number must be 3793493.

If your requested part is not listed in Spare part list, always consult with Parker Division

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins, text, or other markings on the paper.

Position notification regarding Machinery Directive 2006/42/EC:

Products made by the Hydraulic Pump & Motor Europe (HPME) of Parker Hannifin are excluded from the scope of the machinery directive following the "Cetop" Position Paper on the implementation of the Machinery Directive 2006/42/EC in the Fluid Power Industry.

All PMDE products are designed and manufactured considering the basic as well as the proven safety principles according to:

- ISO 13849-1:2015
- SS-EN ISO 4413:2010

so that the machines in which the products are incorporated meet the essential health and safety requirements.

Confirmations for components to be proven component, e. g. for validation of hydraulic systems, can only be provided after an analysis of the specific application, as the fact to be a proven component mainly depends on the specific application.
