

DOUBLE SHANK STUMP PULLER

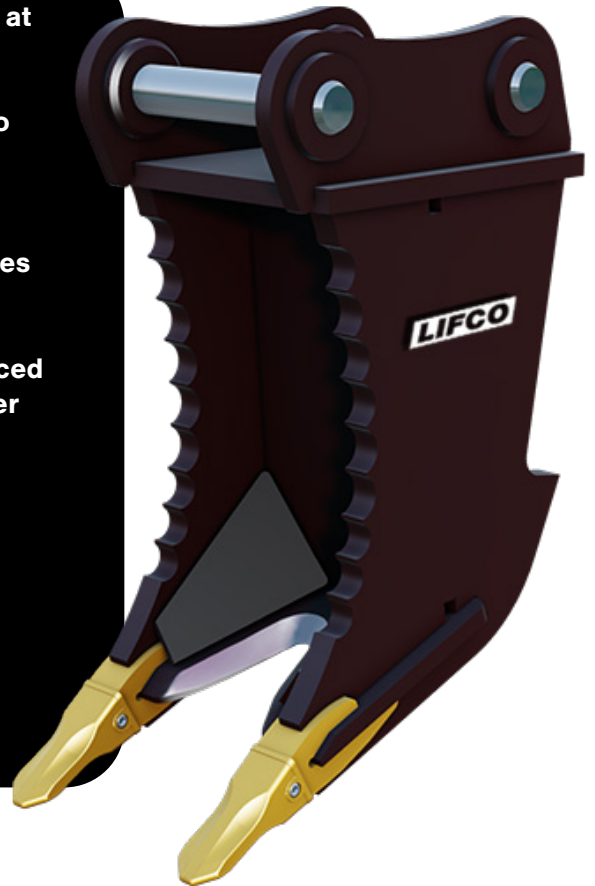

LIFCO
HYDRAULICS & ATTACHMENTS

- Constructed from Canada and USA made T1 & AR400 Steel at all critical points.
- Double shanks get an extra strong grip on the stump compared to a single shank ripper. Shank edges serrated to grip the stump when pulling it out.
- The cutting edge between the shanks is bevelled and sharpened to make slicing through tap roots a breeze!
- Comes with CAT style J-Series teeth. Other tooth preferences available (please inquire).
- Standard length of shanks is measured from below the baseplate of the ears to the tips of the teeth. This is a reduced length compared to a normal bucket to give the stump puller increased break force. We can build stump pullers to your exact bucket length (tip radius) if that is your preference (please inquire).
